Moundhir Bachene

Software Engineer

moundhir.bc@gmail.com | portfolio.bachenesoft.com | github.com/BacheneSoft | linkedin.com/in/moundhir-bachene | Algiers, Algeria — Open to Relocation

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building mobile apps with Flutter and web platforms with Laravel. From a food delivery platform and offline-first distribution systems to multi-tenant SaaS products in production, I take projects from concept to deployment on my own, working with real businesses in Algeria.

PROFESSIONAL EXPERIENCE

Software Engineer (Solo Build) | Ecomufy – Order Management SaaS | Aug 2026 – Present

Multi-tenant SaaS that lets Algerian online sellers manage the full order cycle: confirming orders, tracking stock, sending parcels to the delivery company, handling returns, and following revenue. Built for an e-commerce seller and live at ecomufy.com.

- Order confirmation workflow with automatic stock update on confirm and restore on cancel; products, variants and warehouses.
- Returns handled by barcode scanning with validate-then-restock; Google Sheets order import with column mapping; suppliers and purchase entries.
- Delivery company API integration to send orders for shipping, plus a dashboard (revenue, order status, net income, top-selling variants) and per-confirmer payment tracking.
- Stack: Laravel 11, Filament v4, PostgreSQL.

Software Engineer (Founder, Solo Build) | Moody – Food & Mood | Food Ordering + Restaurant Management + Driver Dispatch & Delivery Tracking | Jan 2025 – Present

Designed, built and launched a two-sided food app (consumer, restaurant & driver) for Gen Z users & local restaurants. In production in Algeria (Android).

- Built the full app using Flutter, Riverpod and Firebase (Auth, Realtime DB, FCM, security rules).
- Merchant features: order lifecycle (accept → ready → complete), menu/prices, stock, discounts & promo codes.
- Consumer features: multi-restaurant cart, delivery/pickup, location-based filtering and real-time updates.
- Handled the full product lifecycle: roadmap, QA, deployment strategy, and user onboarding for launch.
- Implemented guest mode with guest-to-user data transfer and strong error and permission handling.
- Improved performance (lazy load, image caching, debounced search) and applied clean architecture patterns.
- Driver app (3rd layer): full-screen order offer with 60s countdown, Firebase first-accept-wins acceptance, and automatic broadcast to nearby drivers using Haversine distance filtering.
- Streamed real-time GPS to the consumer app during active deliveries, with live tracking on Google Maps and a 4-phase state machine (heading → arrived → picked up → delivered) triggering order status updates via Cloud Functions.
- Applied Algerian data protection Law 18-07: driver identity data stored in device-local secure storage only.

Software Engineer | Artisan Marketplace App | April 2026 – Present

Two-sided marketplace connecting clients with local artisans across Algeria. Single Flutter app with two user roles (client + artisan).

- Built the full booking flow: artisan discovery, contact unlock, quote exchange, and in-app credit payment.
- Implemented a wallet system via Cloud Functions (TypeScript): free credits on signup, Firestore transaction-based transfers, and full transaction history.
- Artisan onboarding: phone OTP, document upload, admin approval queue, profile setup, and portfolio management.
- Real-time chat, FCM push notifications with deep-link routing and live booking status and balance streams.
- Stack: Flutter, Riverpod, GoRouter, Clean Architecture, Firebase (Firestore, Auth, Storage, Cloud Functions, FCM), Flutter Web admin dashboard.

Software Engineer (Mobile) | PawLink, Thirduni Cohort 1 | Oct 2026 – Nov 2026

Animal rescue platform built by a team of fellow participants during the Thirduni capstone month (applied AI program supported by the U.S. Embassy in Algeria).

- Built the Flutter mobile prototype: report flow with triage rules, interactive OpenStreetMap, services directory, and adoption listings.
- Stack: Flutter, Riverpod, go_router, geolocator, image_picker. Runs on mock data; backend integration planned.
- Code: github.com/Maelryn/PAWLINK (apps/mobile).

Software Engineer (Solo Build) | Fleet & Car Rental SaaS | Jun 2026 – Aug 2026

Multi-tenant B2B SaaS platform for car rental agencies operating in Algeria, built and deployed solo.

- Designed a multi-tenant architecture isolating each agency's fleet, clients, and bookings on shared infrastructure.
- Built a Filament-based admin panel for vehicle, reservation, and client management.

- Designed the PostgreSQL relational schema covering vehicles, bookings, and agency accounts.
- Owned the full build end-to-end — schema design, backend logic, admin UI, and production deployment.
- Automatic Algerian-compliant invoicing (NIF/NIS/RC/TVA), client ledger, and insurance/inspection expiry alerts.
- Stack: Laravel, Filament, PostgreSQL.

Software Engineer | Van Distribution (Offline-First) | Nov 2025 – Jan 2026

Direct Store Delivery (DSD) and Van Sales mobile solution for distributors and wholesalers that helps field teams make sales, track inventory across depots, and close daily accounts, while operating entirely offline — reducing manual entry, reducing stock errors, and ensuring accurate matching with central systems.

- Implemented conflict-safe sync ensuring accurate financial and stock records across depots.
- Built XML-based enterprise synchronization (DATAPACKET format): morning import/evening export.
- Integrated Bluetooth printing, barcode scanning, and GPS geo-tagging for field operations.

Software Engineer | Stock Manager | Aug 2025 – Nov 2025

Professional inventory and sales manager for retail/wholesale stores that enforces data accuracy, automates credit/payment reconciliation, and secures local access — helping reduce inventory errors, speed up cash closing, and protect device access.

- Designed relational database schemas for inventory, suppliers, clients, and debt tracking.
- Implemented credit tracking with automatic payment allocation across outstanding balances and advances.
- Built daily closing (Clôture) workflows tracking daily turnover and profit margins, capturing cost price at time of sale.

Software Engineer | Van Distribution (Cloud-Sync) | Oct 2024 – Mar 2025

Mobile Distribution Management System that lets distributors (multi-van field teams) perform sales, manage inventory and reconcile finances in low- or no-connectivity environments — removing manual paperwork, preventing stock errors, and speeding up daily financial closing.

- Implemented hybrid storage architecture (SQLite + Firebase Realtime DB) with sync that updates when connected.
- Designed a custom Firebase caching engine (TTL + memory optimization) for low-connectivity environments.
- Built the mobile app to work with the desktop system in real time.

Technical & Product Analyst — Web3 (Prior Role) | Krea8te (Sastanaqqam) | Algiers, Dubai | Apr 2022 – Sep 2024

- Technical Execution & QA: Managed MPC wallet configuration, executed token vesting contracts, and led QA for NFT marketplace features (minting, rentals, royalties, WalletConnect).
- Product & Documentation: Designed wallet UX flows and collaborated on whitepapers and investor pitch decks.
- DeFi Analysis: Analyzed DeFi protocols and tokenomics to identify DApp integration opportunities; represented the company at international blockchain events.

EDUCATION

MSc in Fundamental Informatics & Information Technology | People's Friendship University of Russia (RUDN) Moscow | 2019 – 2021

BSc in Computer Science | Yahia Fares University of Medea — Medea, Algeria | 2015 – 2018

Thirduni Cohort 1, Applied AI Program (U.S. Embassy Algiers) | Sep 2026 – Oct 2026 | Certificate of Completion, Nov 2026 — one of 400 fellows selected from 27,000+ applicants

TECHNICAL SKILLS

Frameworks & Languages: Flutter, Dart, Material 3, SQL (SQLite), REST APIs, Git

State Management: BLoC, Riverpod, Provider

Architecture: Clean Architecture, Repository Pattern, Offline-First Sync

Backend & SaaS: Laravel 11, Filament v4, PostgreSQL, Multi-Tenant Architecture

CI/CD: GitHub Actions (flutter analyze, dart format, flutter test on every push)

Backend & Cloud: Firebase (Firestore, Auth, Realtime DB, Storage, Cloud Functions in TypeScript, FCM)

Specialized Integrations: Google Maps SDK, Mapbox SDK, OpenStreetMap, Biometrics (local_auth), Bluetooth Thermal Printing, Barcode Scanning, GPS, PDF Generation

Data & Analysis: Blockchain & DeFi, Data Analysis, Tokenomics, Data Visualization

LANGUAGES

Arabic: Native | English: Advanced (IELTS 7) | French: Advanced | Russian: Upper-Intermediate
